

ALEXANDER C. PORTENTO

Computer Science Student | Junior Web / Software Development Candidate

Cavite, Philippines • +63 9201818415 • alexander.portento@email.com • github.com/kessoku-jpg • linkedin.com/in/alexander-portento

PROFESSIONAL SUMMARY

Computer Science student with hands-on experience developing academic software projects using HTML, CSS, JavaScript, PHP, MySQL, Python, and Android development tools. Interested in entry-level technology roles involving web development, software testing, data processing, and technical support. Detail-oriented, willing to learn new technologies, and comfortable working independently or in a team.

TECHNICAL SKILLS

Programming	Python, Java, PHP, JavaScript, HTML, CSS, SQL
Development	Web development, Android development, REST/API fundamentals, CRUD systems
Database	MySQL, relational database design, SQL queries
Tools	Git/GitHub, VS Code, Android Studio, NetBeans, Microsoft Office, Google Workspace
Other	Software testing, debugging, documentation, data entry, technical research

PROJECT EXPERIENCE

AlertEd — Real-Time Academic Risk Monitoring and Grade Transparency System

Academic Capstone Project | 2026

- Developed a web-based academic monitoring system designed to provide students and teachers with transparent access to academic performance information.
- Implemented user roles for administrators, teachers, and students, including section management and subject grade workflows.
- Worked with PHP and MySQL for backend logic and database operations, with HTML/CSS/JavaScript for the client interface.
- Designed relational data structures linking users, students, teachers, sections, subjects, and grades.

AI-Powered Resume Screening and Job Matching System

Academic Research / Software Project | 2026

- Explored NLP-based resume processing and semantic similarity to compare applicant qualifications with job requirements.
- Worked with text extraction, preprocessing, feature representation, and machine-learning concepts for candidate matching.
- Prepared system documentation, research materials, and prototype workflows for an Android-based implementation.

Carbar – Car Rental System

Academic Software Project | 2025

- Designed system workflows for vehicle management, customer registration, rental transactions, and return processing.
- Implemented database-driven functionality for storing and managing vehicle, customer, and rental information.
- Developed user interfaces and system features with a focus on usability, organization, and efficient data management.
- Created system documentation, diagrams, and project materials covering requirements, system design, and development processes.

EDUCATION

Bachelor of Science in Computer Science

Cavite State University — Main Campus | 2024–Present

Relevant coursework: Programming, Database Systems, Web Development, Software Engineering, System Analysis and Design, Research Methods.

ADDITIONAL INFORMATION

Languages: English, Filipino

Work Preference: Entry-level / internship / part-time technology roles

Availability: To be discussed
